

## Device Reader

This tool reads the available features of a device. A visualization shows if a feature is available or not.

### Product description

#### Licensing:

No license is required.

This tool reads the available features of a device. A visualization shows if a feature is available or not.

The Device Reader is designed as standalone application and should not be integrated into another application, because demo mode for all features will be disabled by the device reader.

The visualization shows an overview of all possible features. Each feature has a status field which turns to green if the feature is available for the active device.
